ATTACHMENT TO ADVISORY

1. The proposed after final amendment filed December 3, 1996, introduces new features in claims 71 and 73-86 such as supplying "plural color component information" and developing and combining "patterns" from the color component information and "at least one pattern" from the character code data in a memory "capable of handling each color". The new features raise new issues requiring further consideration and may require further search.

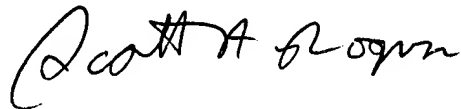

2. The after final response is not fully responsive in that applicant did not file a supplemental declaration addressing proposed changes to the claims and correcting defects discussed in the final Office action. Applicant must make a bonafide attempt to respond to all rejections (see 37 CFR 1.111(b)). A draft supplemental declaration without signatures would be acceptable for examination on the merits. Note that claims 1-70 should also have been indicated as rejected based on the defective declaration.
